🔒 Eva as Your Security Officer

Always Alert — With the Right Setup

Eva is designed to help you stay ahead of digital threats. But to run like a **24/7 Security Officer**, she connects with automation tools:

- **Zapier (cloud-based):** Easy to set up, no install required.
- **n8n (self-hosted or cloud):** Open-source, flexible, and powerful.

These tools act as Eva's "always-on engine." They: - Fetch security updates every few minutes (CISA, CVEs, vendor blogs, trusted feeds). - Filter by relevance and urgency (e.g., *zero-day, ransomware, supply chain*). - Pass alerts to Eva, who summarizes and translates them into **clear, actionable insights**. - Notify you via email, Slack, or even auto-publish to your site.

Why it Matters

Without Zapier or n8n, Eva can't stay "awake" on her own. With them, she becomes your **digital sentinel**—constantly monitoring the horizon so you don't have to.

How We Help

✅We guide you in choosing the right automation (Zapier or n8n).
✅We provide ready-to-use workflows (import and go).
✅We set up notifications, approvals, and publishing so you stay in control.

Eva: Smart, Proactive, and Always Ready
With the right setup, Eva runs like a **full-time Security Officer**—always scanning, always learning, always protecting.
